

LENOVO LEAP AI INTERNSHIP

Assignment 1: Chatbot Development

Submitted By

Name: Jagesh Rana

Course: BTech (Electronics & Telecommunication Engineering)

College: Government College of Engineering, Nagpur (GCOEN)

1. Introduction

Artificial Intelligence chatbots are software applications designed to interact with users through natural language conversations. They provide instant responses to user queries and improve accessibility to information. This project focuses on developing a simple chatbot that assists students by providing information related to college admissions, departments, placements, events, and contact details.

2. Project Title

GCOEN Campus Assistant Chatbot

3. Objective

The objective of this chatbot is to provide quick and easy access to important college-related information. The chatbot helps students and visitors obtain information without navigating through multiple webpages.

Main Objectives

- Provide admission-related information.
 - Display available departments.
 - Share placement-related details.
 - Inform users about college events.
 - Provide contact information.
 - Handle unknown queries using a fallback response.
-

4. Target Users

The chatbot is designed for:

- Prospective Students
- Current Students
- Parents

- Visitors
 - College Staff
-

5. Platform and Technologies Used

Frontend

- HTML
- CSS
- JavaScript

Hosting Platform

- GitHub Pages

Development Tools

- Visual Studio Code
 - Web Browser
-

6. Chatbot Working

The chatbot follows a rule-based conversation flow. When a user enters a query, the chatbot checks for predefined keywords and returns the appropriate response.

If the query does not match any predefined category, the chatbot displays a fallback message.

7. Conversation Flow

Start

↓

Welcome Message

↓

User Query

↓

Identify Query Type

↓

Admission / Departments / Placements / Events / Contact

↓

Provide Appropriate Response

↓

Ask for Another Query

↓

End

Fallback Flow

Unknown Query

↓

Display:

"Sorry, I can only answer campus-related questions."

8. Chatbot Features

Feature 1: Admission Information

Provides details regarding admission procedures.

Feature 2: Departments Information

Displays departments available in the college.

Feature 3: Placement Information

Provides information about training and placement activities.

Feature 4: Events Information

Shows information about workshops, competitions, and college events.

Feature 5: Contact Information

Provides contact-related assistance.

Feature 6: Fallback Response

Handles unsupported questions gracefully.

9. Sample Interactions

Interaction 1

User: Admission Information

Bot: Admissions are conducted through MHT-CET and CAP rounds.

Interaction 2

User: Departments

Bot: Available departments include Electronics & Telecommunication, Computer Science, Mechanical, Electrical and Civil Engineering.

Interaction 3

User: Placements

Bot: The Training and Placement Cell manages campus recruitment and internships.

Interaction 4

User: Events

Bot: The college regularly organizes workshops, technical competitions and innovation activities.

Interaction 5

User: Contact

Bot: Please contact the college administration office for assistance.

Interaction 6 (Fallback)

User: What is today's weather?

Bot: Sorry, I can only answer campus-related questions.

12. Learning Outcomes

Through this assignment, I learned:

- Fundamentals of chatbot development.
 - Designing conversational workflows.
 - Implementing rule-based responses.
 - Hosting web applications using GitHub Pages.
 - Improving user interaction through chatbot interfaces.
-

13. Conclusion

The GCOEN Campus Assistant Chatbot successfully provides essential college-related information through a simple and user-friendly interface. The project demonstrates the basic concepts of chatbot development, conversation flow design, and web deployment. It can be further enhanced by integrating AI and database support for more advanced interactions.
